A Fresh Approach and New Look
The innowave Chiller 3™ brings a unique, fresh approach, and a new look, to point-of-use systems in the marketplace. Unlike a bottled water cooler, incoming tap water is treated as it's needed, so the water is always fresh and great tasting. The innowave Chiller 3™ has a cooling capacity that surpasses that of the ordinary bottled water cooler, so you are sure to get a cold, refreshing serving of drinking water every time.

Water - Drink 8 a Day
Health care professionals recommend that the average person drink at least 8 - eight ounce servings of water every day. Unfortunately, over 2,100 contaminants have been identified as potential threats to the drinking water supply. They fall into four groups: Organic, Inorganic, Biological and Radioactive. A point-of-use water treatment system is ideal for consumers concerned about their local water quality, or who are simply looking to have better tasting water.

Filtration Technology Enhances Drinking Water
The innowave Chiller 3™ uses 3-stage filtration to treat drinking water. First, a 5-micron Sediment filter traps sediment and solid particle matter. Then, a 1-micron Carbon Block filter reduces contaminants as small as 1-micron. Next, a Granular Activated Carbon filter reduces chlorine and polishes taste.

Tested & Proven to Perform
The 1-micron filter used in the innowave Chiller 3™ has been tested and certified by WQA according to NSF/ANSI Standard 53: Drinking Water Treatment Units - Health Effects for the reduction of at least 90% of lead and 99.99% of cysts. The 1-micron and Granular Activated Carbon filters have also been tested and certified to NSF/ANSI Standard 42: Aesthetic Effects for the improvement of taste and odor and aesthetic chlorine reduction. The innowave Chiller 3™ has been tested and complies with UL Standard 399.

ITS™ Controls Bacteria
The innowave Chiller 3™ is also equipped with ITS™ (In-Tank Sanitization). This feature utilizes ultraviolet light as an effective method to prevent the potential for biofilm (slime) buildup in the storage tank after chlorine has been reduced through carbon filtration. Ultraviolet technology also helps reduce any heterotrophic bacteria that may occur in drinking water.

innowave Chiller 3™ Treatment Process

1. Sediment Filtration
   - Reduces particles as small as five microns (0.002 in.)
   - Reduces sediment
   - Adds to the life of the carbon filter

2. Micron Filtration
   - Traps contaminants as small as one micron (0.0004 in.)
   - Reduces chlorine and organic contaminants

3. Filtration (granular activated carbon)
   - Improves taste and odor
   - Reduces chlorine

4. Ultraviolet Light
   - Reduces heterotrophic bacteria
   - Valuable alternative to chlorine
Filtration Technology
- 3-stage process ensures great-tasting, high-quality water
- 5-micron Sediment filter reduces sediment and solid particle matter
- 1-micron Carbon Block filter is effective in reducing chlorine, lead and cysts
- Granular Activated Carbon filter enhances taste and odor of water and reduces chlorine

ITS™
- In-Tank Sanitization (ITS™) utilizes ultraviolet light to prevent build-up of biofilm (slime)
- Reduces the need for preventative maintenance and improves drinking water quality

Independent Testing
- 1-micron filter tested and certified by WQA according to NSF/ANSI Standard 53: Drinking Water Treatment Units – Health Effects for the reduction of lead and cysts
- 1-micron and Granular Activated Carbon filters have been tested and certified to NSF/ANSI Standard 42: Aesthetic Effects for the reduction of chlorine and improvement of taste and odor
- Tested to UL Standard 399 to meet safety requirements

innowave Chiller 3™ Specifications:
- **Height**: 40.5” (103 cm)
- **Width**: 13.5” (34 cm)
- **Depth**: 16.0” (41 cm)
- **Water Connection**: 1/4” tubing
- **Weight**: 58 lb. (26.3 kg)
- **Electrical Supply**: 120V/60Hz
- **Amps**: 8.3 amps for hot/cold units
